PROJECTS

Lingo (click me) – An AngularJS based single-page web application that helps users learn a second language by reading the news. By using the New York Times API, Lingo supplies users with partially translated news articles with hover to translate as a key feature. Lingo allows users to set their language level, choose article topics, and choose between French or Spanish.

Adventures in Gridland (click me) – Built using BackboneJS, Adventures in Gridland is a "Snake" inspired grid game. The aesthetic is clean and simple to give that analog feel. The less moves you make the higher your final score.

Sk8Site (click me) – This is a great example of how a mockup from Photoshop can be brought to life. Using HTML5 and CSS3/SASS, this site is an example my design capabilities.

EDUCATION

The Iron Yard, Charleston, SC — *Front End Engineering*

May 2016 - August 2016
